- Triple glazed window 4/16Ar/4/16Ar/4 Ug=0,5 W/m²K with warm edge spacer bars (warm frame colours p. 33), optionally thermopanel with aluminium sheet on the outside of the balcony windows
- windows - Roto PN hardware with anti-theft protection (windows on scissor modules or window hinges), hotel security (Top-Swing windows),
- balcony windows with Roto NX hardware, external hinges protected against corrosion and adjustable in two planes,
- Profile seal in white or brown, brush seal in frame in grey
- aluminium cladding on the outside
- handles - available models and colours page p. 40

ADDITIONAL ACCESSORIES

glazing units - p. 33
fitting accessories - p. 43-46
air inlets - p. 42

muntings: Vienna bars, on clasps bars, inter-pane bars and structural bars - p. 44

AVAILABLE VARIANTS

The FSC® 100% certificate is held by: single-frame windows and terrace windows without thermopanel - pine and oak

Warranty up to 5 years - detailed conditions available at www.pol-skone.eu.

thermal transmittance*: 0,83 W/(m²K)

water tightness: 5A

air permeability: 4

resistance to wind load: C2

acoustic properties*: 34 (-1;-5) dB

(*) The provided values of the thermal and acoustic insulation apply to the reference window of the dimensions of 1,23 x 1,48 m

PATIO FOLD

WOODEN/
WOOD-ALUMINIUM

PATIO FOLD (folding) terrace windows allow for obtaining maximum space in the passage after folding the sashes. PATIO FOLD window sashes fold inwards.

STRUCTURE

WOODEN: single frame terrace window, the leaf and frame thickness depending on the system:

ENERGY CONCEPT 90 - 90 mm, TYPE C PLUS - 78 mm, TYPE C - 68 mm, glazing bead Type C; optionally S-System

WOOD-ALUMINIUM: single frame terrace window, the leaf and frame thickness depending on the system:

ENERGY CONCEPT 90 ALU-EFFECT: 90 mm, with cladding 103 mm, TYPE C PLUS ALU-EFFECT: 78 mm, with cladding 91 mm

TYPE C ALU-EFFECT: 68 mm, cladding 81 mm, glazing bead Type C; optionally S-System

MATERIAL

glued laminated pine wood, optionally oak

FINISH

water soluble covering paints or transparent paints, a three-layer covering system, a four-layer transparent system; powder painted aluminium, the RAL basic colours 9016, 9010, 9007, 9006, 9005, 8019, 8017, 8007, 8001, 7042, 7035, 7016, 6005, 5010, 3004, 1013 the other colours of the RAL palette are available at extra charge

STANDARD OF CONSTRUCTION

- Glazing unit according to the window system,
- Roto Patio Fold hardware with anti-theft catch and handle misplacement block,
- number of seals depends on the window system,
- adjustable system hinges,
- bottom and top rail with sash carriages,
- drip cap and mini drip cap (external aluminium glazing bead) in wooden systems - p. 49
- aluminium drip cap and aluminium cladding in wood-aluminium systems - p. 42
- handles - available models and colours page p. 39

ADDITIONAL ACCESSORIES

low aluminium threshold
warm frame colours - p. 35
fitting accessories - p. 43-46

glazing units - p. 34
air inlets - p. 42
muntins: Vienna bars, on clasps bars, inter-pane bars and structural bars - p. 44

Warranty up to 5 years - detailed conditions available at www.pol-skone.eu.

PARAMETERS DEPENDING ON THE VARIANT OF CONSTRUCTION AND THE WINDOW SYSTEM

PATIO INOVA

EC 90

WOODEN

PATIO INOVA is a system of terrace windows with a sliding outer sash, thanks to which the system is characterised by exceptional tightness. The advantage of the system is an innovative fixed glazing in PANORAMA version (glass mounted directly in the threshold and lintel of the window), which allows maximum room illumination.

STRUCTURE

single frame terrace window, the leaf and frame thickness depending on the system: Energy Concept 90: leaf 90 mm, frame 200 mm, glazing bead Type C optionally S-system, oak doorstep cap on the inside, aluminium doorstep cap on the outside, wooden drip cap in the lintel

MATERIAL

glued laminated pine wood, optionally oak

FINISH

water soluble covering paints or transparent paints, a three-layer covering system, a four-layer transparent system

STANDARD OF CONSTRUCTION

- Triple glazed window 4/16Ar/4/16Ar/4 Ug=0,5 W/m²K with warm edge spacer bars (warm frame colours p. 33), optionally thermopanel
- Roto Patio Inova hardware with anti-theft strike,
- drip cap (external aluminium glazing bead) in the sliding sash - p. 49
- aluminium outside handle allowing the sash to be slid from the outside
- frame seal around the sash
- handles - available models and colours page p. 39

ADDITIONAL ACCESSORIES

glazing units - p. 33
muntins: Vienna bars, on clasps bars, inter-pane bars and structural bars - p. 44

Soft Open and **Soft Close** system - a hidden system braking the sash when opening and closing and pulling it to the final position, increases the comfort of use by gently opening and closing the sash

OPENING CONFIGURATIONS

SCH. A, SCH C, SCH G, SCH K - p. 6

The FSC® 100% certificate is held by: single-frame windows and terrace windows without thermopanel - pine and oak

Warranty up to 5 years - detailed conditions available at www.pol-skone.eu.

S-SYSTEM

TYPE C

thermal transmittance*: 0,75 W/(m²K)

water tightness: 7A

thermal transmittance*: 0,82 W/(m²K)

water tightness: 4A

air permeability: 4

resistance to wind load: C2

acoustic properties:

(*) The provided values of the thermal and acoustic insulation apply to the reference window of the dimensions 3,0 x 2,20 m

STANDARD

TYPE C

HS

PANORAMA DUAL

WOOD-ALUMINIUM

An innovative version of HS windows characterised by panoramic fixed glazing. The glazing of the fixed sash is embedded in the threshold and thus flush with the floor. In addition, frameless fixed glazing on the side and top provides maximum light into the room and a panoramic view of the garden. The modern character of the window is completed by the external aluminium cladding with a contemporary profile.

STRUCTURE

single frame terrace window, the leaf thickness 78 mm with cladding 91 mm, frame thickness 198 mm with cladding 211 mm, system without glazing beads on the inside

MATERIAL

glued laminated pine wood, optionally oak

FINISH

water soluble covering paints or transparent paints, a three-layer covering system, a four-layer transparent system; aluminium powder painted aluminium, the RAL basic colours 9016, 9010, 9007, 9006, 9005, 8019, 8017, 8007, 8001, 7042, 7035, 7016, 6005, 5010, 3004, 1013 the other colours of the RAL palette are available at extra charge

STANDARD OF CONSTRUCTION

- Triple glazed window 4/16Ar/4/16Ar/4 Ug=0,5 W/m²K with warm edge spacer bars (warm frame colours p. 33)
- silicone system seals
- MACO Rail-System fittings; bogies with brushes for clean running rail and therefore smooth sash movement, hooked espagnolette with recessed catches for high mechanical burglary protection and modern window design
- flush top guide bar - no protruding hardware parts in the window lintel
- fibreglass threshold with thermally insulated inserts with 5 mm running rail
- handles - available models and colours page p. 39

ACCESSORIES AND EQUIPMENT

glazing units - p. 33

sash lowering shock absorber - an invisible sash shock absorber reduces the resistance force and causes a gentle return of the handle dedicated to heavy sashes - p. 26

reed switches - p. 43

espagnolettes with insert - p. 41

automatic closing and opening systems - p. 26

resistance to wind load: 1

WINDOW SHUTTERS

STRUCTURE

Fixed laths (13x46mm) built into a 42 mm thick wooden frame

MATERIAL

wood: pine, oak

FINISH

water soluble covering paints or transparent paints, a three-layer covering system, a four-layer transparent system

HARDWARE

Option 1
standard hinge

Option 2
hinge with decorative
metal plate

Option 3
hinge with corner metal
plate

CLOSING HARDWARE

single closing set for
single leaf
shutters

single closing set for
double
leaf shutters

WAY OF OPENING

Single leaf shutter

WAY OF OPENING

Option 1 - fitted to the window frame*. After closing the window shutter, the entire shutter hides in the wall which provides better protection from the exterior weather conditions. The shutter opening angle is 180 degrees. Note! The type of hinges is to be selected depending on the embrasure depth (0-275mm)

* not applicable to windows with aluminium cladding from outside

Option 2 - fitted on the shutter's own frame.

Additionally, the entire window hole should be additionally covered with 24 mm x 80 mm wooden mouldings (the window shutter frame). Hardware should be fitted to the frame according to the drawing. This way of fitting the window shutter improves the appearance of the window while keeping it functional.

Option 3 - fitted to the wall.

The most traditional way of fitting window shutters. The shutter hardware is fitted directly to the wall. It should be remembered, however, that before the elevation repair works, e.g. laying the exterior wall insulation, the wooden beams should be fitted beside the window to reduce the gap between the wall and the window shutter hardware.

Double leaf shutter

WINDOW RAILINGS

PORTFENETR

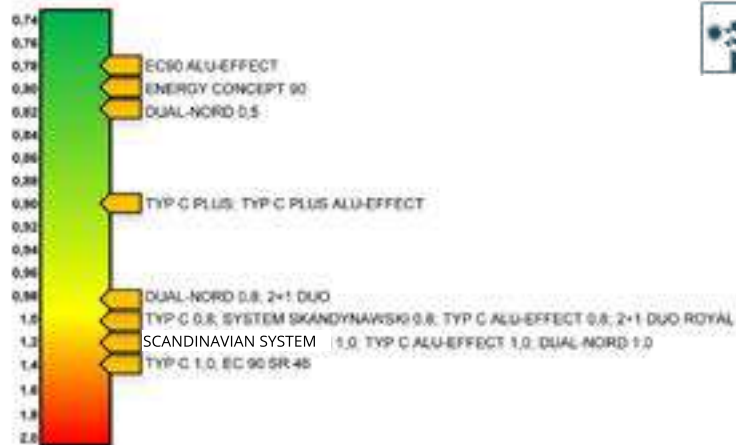

With modern architectural trends in mind, Pol-Skone offers PORTFENETR window balustrades, which can be installed in the **Type C PLUS** and **Energy Concept 90** systems.

Aluminium PORTFENETR system is fixed to the wooden window frame, guaranteeing high level of security thanks to laminated toughened glass. The application of this construction makes the interior maximally illuminated and the building gains a modern character.

(SWISSPACER ULTIMATE warm frame available at extra charge)

Triple glazed windows $U_g = 0,5 \text{ W/m}^2\text{K}$

THE UNIT CONSISTS OF:

PLANITHERM ONE 4mm/16 Ar/PLANICLEAR 4mm/16 Ar/ PLANITHERM ONE 4mm, $U_g=0,5 \text{ W/m}^2\text{K}$ $g=38\%$, $Lt=59\%$
or PLANITHERM XN 4mm/18 Ar/PLANICLEAR 4mm/18 Ar/ PLANITHERM XN 4mm, $U_g=0,5 \text{ W/m}^2\text{K}$ $g=54\%$, $Lt=74\%$

U_g - thermal transmittance of glazing unit
 g - the total solar energy transmittance coefficient
 Lt - light transmission coefficient

AVAILABLE OPTIONS:

- GLAZING FOR BEST DAYLIGHT IN COMBINATION WITH HIGHEST SOLAR ENERGY TRANSMITTANCE:

ECLAZ - a new generation of coatings for maximum room illumination - light transmission of up to 77% and solar energy transmission of up to 60%. Glazing units with ECLAZ reflect internal heat while letting in plenty of light and solar energy from outside (providing free heat).

- SUNSCREENS:

STOPSOL - solar control glass reduces the amount of heat energy from the sun, reflective coating for greater privacy, available in grey, brown, blue and clear.

COOL-LITE SKN - selective glass characterised by a low solar energy transmittance parameter (g) in relation to the solar light transmittance (Lt) makes it possible to dispense with additional constructions interfering with the body of the building (blinds, shutters, etc.). Glass with a natural appearance and high transparency.

MIRASTAR - glass with a "Venetian mirror" effect

SAFETY GLAZING:

WITH TOUGHENED glass - provides high strength when struck by a soft body, up to 5 times greater than standard non-toughened glass of the same thickness. When broken they shatter into many small and tiny pieces, just like a car windscreen.

LAMINATED GLASS - provides an effective barrier against intrusion. Laminated glass consists of two or more panes of glass with internal PVB films 0.38 mm thick. Depending on the combination and the number and thickness of the individual panes of glass and PVB films, laminated glass can be produced with different properties. Thanks to an inner layer - a special film - when laminated glass breaks, the film keeps the glass intact, thus protecting it from serious injury. Laminated glass protects against attempted break-ins, acts of vandalism and even prevents breaking through the glass during a forcible break-in.

SOUNDPROOFING GLAZING:

- UNITS WITH ACOUSTIC INSULATION UP TO 41 dB WHILE MAINTAINING THE COEFFICIENT $U_g=0,5 \text{ W/m}^2\text{K}$

- UNITS WITH SOUND INSULATION OF UP TO 50 DB WITH INCREASED HEAT TRANSFER COEFFICIENT

- GLAZING WITH FUNCTIONAL COATING:

BIOCLEAN GLASS - glass with a durable transparent outer coating with photocatalytic and hydrophilic effects. The natural effects of sun and rain help keep the glass clean for longer. The glass is also easier to clean.

ORNAMENT GLASS - the sophisticated glass structure lets the light in and marks the boundary between transparency and privacy. The timeless design gives each interior an individual character.

GLAZING UNITS

DOUBLE GLAZED $U_g = 1,0 \text{ W/m}^2\text{K}$

THE UNIT CONSISTS OF:

4mm FLOAT/16 Ar/THERMOFLOAT
1,0, $U_g=1,0 \text{ W/m}^2\text{K}$ $g=54\%$, $Lt=76\%$

U_g – thermal transmittance of glazing unit
 g - the total solar energy transmittance coefficient
 Lt - light transmission coefficient

AVAILABLE OPTIONS:

- SUNSCREENS:+

STOPSOL – solar control glass reduces the amount of heat energy from the sun, reflective coating for greater privacy, available in grey, brown, blue and clear.

ANTISOL - solar control glass, which reduces the transmission of solar energy, thus preventing overheating of rooms. Available in the following colour variants: grey, brown, blue and green.

COMBI NEUTRAL - selective glass characterised by low solar energy transmittance (g) in relation to solar light transmittance (Lt). The best possible use of daylight and sunlight thanks to high natural light transmission, colour neutrality and colour fidelity.

ANTISOL - solar control glass, which reduces the transmission of solar energy, thus preventing overheating of rooms. Available in the following colour variants: grey, brown, blue and green.

MIRASTAR - glass with a "Venetian mirror" effect

TRIPLE GLAZED $U_g = 0,8 \text{ W/m}^2\text{K}$

THE UNIT CONSISTS OF:

THERMOFLOAT 1,1 4mm/10 Ar/FLOAT

AIR INLETS

AIR INLETS FOR INWARD OPENING WINDOWS

AERECO EMM HIGROSTER - humidity sensitive air inlet controlled automatically, with a lock function in the minimum flow position. When set in the open position, the damper changes its position depending on the content of water vapour (relative humidity) inside the room. The air flow rate is between 6 and 30 m³/h. The lever in the closed position, blocks the damper, the unit is set in the minimum flow rate position, the device delivers up to 6 m³/h.

Flow rate [m³/h] 6-30

Acoustics [dB(A)] 38 (0.1) - air inlet open

Acoustic performance [dB(A)] 40 (0.0) - air inlet closed

Installed in the window frame or sash

AERECO AMO PRESSURE AIR INLET - Self-regulating pressure air inlet with the possibility of setting the shutter in the minimum flow position.

When the louver is set in the open position, the amount of supplied air depends on the pressure difference inside and outside the room, up to 27 m³/h at 10 Pa negative pressure. When the shutter is in the closed position, the ventilator delivers the minimum amount of air, 6 m³/h at a negative pressure of 10 Pa.

Flow rate [m³/h] 6-27

Acoustic performance [dB(A)] 32 (-1;1) - air inlet open

Acoustic parameters [dB(A)] 33 (0;0) - air inlet closed

Installed in the window frame or sash

AIR INLETS FOR OUTWARD OPENING WINDOWS

trykvent 283 air inlet - a recessed air inlet opened manually by pressing buttons located at both ends of the diffuser. The air inlet has a seal between the damper and casing which guarantees tightness in the closed position.

The ventilator is mounted in the frame of opening windows and fix windows. For fixed windows only the internal part, for fixed windows also the external air intake. .

TRYKVENT air inlet 283 internal part

external air intake (only FIX windows)

FITTING ACCESSORIES

LOCKING ROLLERS OF THE CIRCUMFERENTIAL FITTING

The Roto hardware system offers three different types of locking rollers for a variety of applications and thanks to the flat guiding of the rollers, ensures easy running and wear resistance.

All locking rollers are adjustable:

- locking roller E: eccentric locking roller with clamping force adjustment ± 0.8 mm
- locking roller P: eccentric locking roller with pressure adjustment ± 0.8 mm
- locking roller V: eccentric locking roller with clamping force adjustment ± 0.8 mm and vertical adjustment ± 0.8 mm

locking rollers E

locking rollers P

locking rollers V

TILT FIRST

In the children's room, as well as in other rooms on upper floors where children have access, it is worth using the Tilt-First security device with a special key handle. Thanks to Tilt-First technology, anyone can tilt the window to ventilate the room, but it cannot be opened without a key.

- 1 In the tilted position (handle in the 90° position), there is a blocking mechanism.
- 2 Further turning the handle to 180° and opening the window is only possible after unlocking the locking cylinder with the key. In the closed position (0° - vertically downwards), the handle can additionally be locked, which provides additional burglary protection.

REED SWITCHES

Roto MVS magnetic window opening and closing control system is a solution for monitoring the state of the window: the system controls whether the sash is open or closed. When the magnetic field in the MVS sensor is interrupted, e.g. by breaking the window, the system sends an impulse to the alarm centre through hidden wiring. Additionally, the sensors may cooperate with air-conditioning systems, switching it off when a window is unsealed or opened.

BRAKE IN THE HANDLE

The brake in the handle allows for convenient blocking of open balcony doors or windows within the scope of sash opening from 15° to 90° by turning the handle down. The sash blocked in such a way stands firmly against even the strongest gusts of wind enabling safe communication or ventilating the rooms.

MICROVENTILATION

The task of microventilation is to help remove excess moisture from the building and provide fresh air in the room. By setting the window handle in the right position, a ventilation gap of several millimetres is created between the framework and the window frame.

This ensures a constant exchange of air at any time of the year - both in summer and winter. Microventilation in Pol-Skone windows is integrated with a stay. Such a solution improves the aesthetics of the window and increases the comfort of use by providing an additional ventilation function already as standard.

CONCEALED HINGES

Concealed hinges available in Pol-Skone offer allow raising the aesthetics of our windows to an even higher level. Windows equipped with such hinges are characterized by remarkable elegance and make it easy to keep them impeccably clean.

with concealed hinges

with surface-mounted hinges

FITTING ACCESSORIES

FITTINGS WITH INCREASED RESISTANCE TO BURGLARY

Fittings with increased resistance to burglary in standard are equipped with locking rollers V, steel anti-theft strikers, handle with a key and anti-drilling plate that protects the cassette of the espagnolette against drilling. Such fittings have a greater density of locking points, which translates into a real improvement in security. In the case of windows with fittings with increased resistance to burglary, it is worth additionally equipping the window with a contractron and glazing unit in the P4A class (panes glued together with four PVB foils).

SCISSORS FOR CLEANING

With the "cleaning" scissors for tilt windows, the tilt width can be increased by up to 90° depending on the size of the sash. This allows full access to the window and is very useful when it is necessary to clean or ventilate the room. This solution proves useful in places where access to the tilt window from the outside is difficult.

tilt position

"cleaning" position

LOCKING MECHANISM FOR INCORRECTLY POSITIONED HANDLES

The handle misalignment mechanism prevents the window handle being turned when the sash is not in the frame. This solution prevents unintentional putting the sash into turn and tilt position at the same time.

BALCONY LATCH

An element which allows the balcony sash to be slammed shut without the need to lock the sash with a handle, e.g. in the case of a short visit to the balcony. The sash is opened by pushing the sash out of the grip of the latch. Matching shape of the elements on the sash and the frame allows for better infed and holding power, and thanks to the vertical adjustment up to 7 mm it is possible to optimally set the frame and sash in relation to each other. Long-term reliable operation is guaranteed by the stable spring STRUCTURE.

ESPAÑOLETTE WITH INSERT

In balcony windows, it is possible to use an espagnolette for an insert. This solution reduces the risk of the sash being opened by unauthorised persons. This OPTIONAL solution is available for balcony doors with handle from the inside and obligatory for balcony doors with external handle. The handle can be fitted from the inside or on both sides.

LOCKING FASTENERS

Outward opening side-hung windows on hinges or on modules can be equipped with locking fasteners. A window with fasteners does not have an espagnolette or a handle, and the sash is pressed and closed using special hooks.

HOTEL SECURITY

Top-swing windows opening outwards, from the height of 550mm are, as a standard, equipped with a hotel safety device - the opening limiter, which protects against unintentional opening of the window to its full extent, it is only possible to obtain a small gap enabling airing of the room. To obtain full opening of the sash you need to press the lock and push the sash outwards, the sash in the maximum opening position is also protected against uncontrolled movement caused e.g. by a gust of wind.

FITTING ACCESSORIES

CENTRAL ESPAGNOLETTE IN THE PASSIVE SASH

In the passive leaf, it is possible to use a lever-operated espagnolette instead of scantlings (as standard for leaf widths above 1040 mm or leaf heights above 2200 mm).

LOW THRESHOLD

Barrier-free solutions that increase the freedom of movement around rooms improve the living comfort of all users. The low thresholds for balcony doors and windows available in the Pol-Skone offer meet these requirements. The thresholds are made of high-impact PVC profile and aluminium. The threshold height of 20 mm additionally meets the requirements of barrier-free construction according to DIN 18040 (DIN 18025). The additional use of a drip cap with brush seal effectively protects against driving rain.

Watertightness classes obtained for balcony windows with low threshold

Energy Concept 90 balcony 1-sash	Energy Concept 90 balcony 2-sash	EC 90 Alu-Effect balcony 1-sash	EC 90 Alu-Effect balcony 2-sash
E750 (750 Pa)	6A (250 Pa)	E750 (750 Pa)	8A (450 Pa)

HOOK-AND-LOOP RIGGERS

For maximum security and anti-burglary resistance, hook bolts can be used. Their structure is based on the solutions of locks for front doors, special hook bolts are made of hardened steel, fully anchored in stable steel hooks on the frame, so that balcony windows equipped with them can provide a similar level of security as front doors. This solution is dedicated to outward opening balcony window systems.

DOOR LOCKS

Installing a door lock in balcony windows additionally increases their safety and enables more intuitive operation - the handle, just like in conventional doors, is always set in a horizontal position, enabling easy opening. Locking is ensured by turning the key: it is enough to turn it in order to secure the lock against reversing.

TILT MECHANISMS

If you have high located tilt windows, the ideal hardware in this situation are the floor opening mechanisms. This solution allows you to control the window beyond your hands' reach.

HAND MECHANISM

The manual mechanism makes it possible to tilt and close windows out of reach thanks to a hand lever mounted on the window frame or on the wall. The ergonomic shape of the lever ensures comfortable operation, which is light even with a large opening width. Lever, fabric and covers of moving elements are available in colours: white, brown, black or silver.

ELECTRIC MECHANISM

Drive unit for daily ventilation (mains voltage 230 V), adjustable opening width of 200 mm or 400 mm depending on the electrical connection. In addition, it is easy to operate by remote control or a button. Surface mounted.

FITTING ACCESSORIES

THE BLINDS

The 2+1 DUO window system may be additionally equipped with aluminium lamellas mounted in the space between the wooden and aluminium sashes. The controls for the blinds are located on the inside of the wooden sash, allowing easy and convenient control of the shutter mechanism. In order to prevent children from getting entangled in the control elements, all windows with blinds are equipped with the CHILD SAFETY self-tensioning mechanism and a cord catch. The blinds are available with the following lamella colours.

Muntin bars between panes - placed inside glazing unit between the panes (in double glazing units only in the external chamber). They are available in RAL colours and wood-like veneers. They may be bent into arcs or circles and joined at different angles. Muntin bars mesh made according to individual customer design (after consultation with the sales department).

WOODEN DRIP CAPS

In inward opening wooden window systems it is possible to use optional wooden drip caps elements. This solution is particularly recommended for historic buildings, where the key role is played by reproducing the classic appearance of the window joinery while maintaining high window parameters. The eaves elements are made of the same material as the windows and painted in the same colour so they form a coherent structure.

version 1 of the drip caps available in Type C and Type C PLUS system

possibility to mill for window sills on one or both sides

version 2 of the drip caps available in the Energy Concept 90 system water tightness - 8A (450 Pa)

possibility to mill for window sills on one or both sides

version with 3 drip caps available in the Energy Concept 90 system water tightness - 5A (200 Pa)

possibility to mill for window sills on one or both sides

Version 4 of the drip caps available in the Energy Concept 90 system water tightness - 5A (200 Pa)

possibility to mill for window sills on one or both sides

It is possible to adapt the drip caps according to the customer's or the conservator's drawings (after consultation with the sales department).

STYLISH DECORATIVE ORNAMENTS AND MULLION MOULDINGS FOR WOODEN WINDOWS

Styling set recommended for the window systems: Typ C, Typ C Plus i Energy Concept 90.

RETRO Z2

RETRO Z3

RETRO Z4

RETRO Z5

RETRO Z6

It is possible to reproduce the mouldings on the basis of already existing window elements or to adapt them according to the customer's or conservator's drawings (after consultation with the sales department)

THERMO-INSULATING WINDOW PROFILES AND SILL PLATE

WINDOW FOUNDATIONS AND THERMALLY INSULATED WINDOW SILLS

Thermally insulated under-sill profiles are available for windows dedicated to energy-efficient construction (EENERGY CONCEPT 90 and ENERGY CONCEPT 90 ALU-EFFECT). For balcony windows in these systems and in HS systems (HS EC 90, HS DUAL, HS PANORAMA DUAL), there are CLINARIT under-sill profiles available.

Thermo-insulating under-window profiles and sill plates are an indispensable part of the whole, which is the widely understood so-called warm assembly of window joinery.

XPS UNDER-SILL PROFILES - "WARM WINDOW SILLS"

The use of XPS under-sill profiles prevents the formation of a thermal bridge between the window and the window sill, which significantly improves the thermal and energy properties of the entire building. "Warm window sills" improve the tightness and insulation of the window installation thanks to proper profiling and the use of an expanding tape. In addition, they provide a base for the external and internal window sills. Window sill profiles are made to individual order. The height visible from the inside of the "warm window sill" is 40 mm, width depends on the thickness of the wall and insulation layer.

THERMO-INSULATING CLINARITE WINDOW SILL SUPPORTS

The window sill supports are made of a specially hardened material- CLINARIT, which is characterised by high compressive strength and low heat transfer coefficient. This makes it possible to use them even under very large HS windows in order to eliminate thermal bridges. Clinker foundations ensure uniform linear support of the window across its entire width. The special profile of the sill facilitates installation at the window threshold. The use of an expanding tape prevents the maximum sealing of the connection with the window and prevents blowing under the window sill. At the bottom, the sill plates are equipped with a robust striker strip to allow easy installation of mounting anchors.

Thermal-insulated sill plates are made to individual order. The height of the sill depends on the thickness of the floor insulation layer and the level of the inside floor, width depends on the window profile.

balcony window substructure
